
"EOY Meeting Agenda"

Benefits:

- **How it helps the business owner:** It provides a holistic, visual overview of their business through a structured account review, positioning on the Growth Curve, and an analysis of their volatility. It ends with concrete, actionable steps via the "Start, Stop, Keep" matrix.
- **How it helps the advisor:** It gives the advisor a strict timeline and pie-chart structure to keep the meeting on track, integrates visual analogies (like the speed wobbles), and ensures all critical compliance and strategic topics are covered.
- **Who it is suitable for:** General commercial business clients attending their standard End of Year financial and strategic review.

How to use the material in practice (Step-by-Step):

1. **Set the Agenda:** Display the Agenda-Timeline pie chart to show the client the exact flow of the meeting.
2. **Conduct the Accounts Review:** Summarize the draft accounts, highlight concerns, discuss the tax position, check loan adjustments, and agree on filing timelines.
3. **Review Growth Curve Position:** Show the 9 Growth Stages a business anticipates and help the client identify their current position, from Design through to Exit/Decline.
4. **Explore Volatility:** Introduce the "speed wobbles" analogy to explain that trying to grow with unbalanced systems causes messes. Identify if their volatility stems from Common, Special, Seasonal, or Tampering causes.
5. **Apply Volatility Options:** Brainstorm fixes by reviewing key products, admin procedures, sales tactics, and working capital.
6. **Create Action Steps:** Conclude by having the client list specific behaviors to Start Doing, Stop Doing, and Keep Doing.

Common Q&A:

1. **Q: What sections make up the standard EOY Agenda-Timeline?** A: Review Accts, Review Growth Curve, Review Volatility, Start/Stop/Keep, and Q&A.
2. **Q: How many stages of growth does the curve depict?** A: There are 9 Growth Stages a business may anticipate.
3. **Q: What does the 'speed wobbles' analogy teach the client?** A: It illustrates that "The faster you go, the bigger the mess...", meaning you cannot progress safely until underlying business systems are balanced.
4. **Q: What is "Tampering" in the context of Volatility Analysis?** A: Tampering is a cause of volatility resulting from data misinterpretation and an inappropriate response to that data.
5. **Q: What is the purpose of the 'Start, Stop, Keep' table?** A: It is an automated action plan feature designed to record explicit behavioral changes the owner needs to make, like stopping middle-manager interference.

"Basic Targets"

Benefits:

- **How it helps the business owner:** It clarifies the owner's personal income and leisure expectations, educates them on essential financial ratios, and results in a customized management dashboard that answers vital monthly questions regarding the health of their business.
- **How it helps the advisor:** It provides a structured methodology—the 5 steps in the Advisory staircase—to manage and verify data. It also guides the advisor in setting business development stages and filtering KPIs based on systems that can be actively adjusted.
- **Who it is suitable for:** Business owners who need to connect their personal lifestyle goals to measurable business performance, and those requiring a structured dashboard to track ongoing progress.

How to use the material in practice (Step-by-Step):

1. **Define Expectations:** Have the owner complete the expectations table to document their income and leisure time goals.
2. **Determine Development Stages:** Fill out the scale dynamics required to actually achieve those personal targets.
3. **Apply Management Fundamentals:** Use the 5-step process (Compilation, Assimilation, Interpretation, Application, Observation) to ensure data is properly verified and actions are assigned.
4. **Review Core Ratios:** Calculate common ratios—such as the Current Ratio for solvency or Gross Margin for pricing effectiveness—so the client understands what the numbers measure.
5. **Select Actionable KPIs:** Identify 'headline' data from a systems point of view (Inputs & Outputs), ensuring you only measure things the business can actually **ADJUST TO**.
6. **Finalize the Dashboard:** Ensure the selected KPIs allow the owner to answer the five key questions each month, such as "Can we pay our bills?" and "Are we improving?".

Common Q&A:

1. **Q: What is the defining test for a good KPI?** A: You must ask, "...if we knew the answer to X, how would that help us in our future decision making..?".
2. **Q: What are the 5 components of business management in the Advisory staircase?** A: Compilation/Verification, Assimilation, Interpretation, Application, and Observation.
3. **Q: What is the difference between the Current ratio and Quick ratio?** A: The Current ratio measures overall solvency (Current Assets ÷ Current Liabilities), while the Quick ratio measures immediate liquidity by only using cash and debtors against current liabilities.
4. **Q: How should we approach KPI selection?** A: KPIs should be selected from a 'systems' point of view, focusing strictly on measuring things that you can actively adjust, rather than just things that are measurable.
5. **Q: What are the elements of the Working Capital Cycle KPIs?** A: The core components are Debtors, Cash, Stock, and Sale.
6.

"EOY Rural Meeting"

Benefits:

- **How it helps the business owner (Farmer):** It aligns the review specifically with agricultural milestones (e.g., moving from Sharemilker to Farm Owner). It also helps them map out a long-term 5-year Strategic Spending Plan to balance lifestyle desires with farm operational needs.
- **How it helps the advisor:** It provides a highly tailored, industry-specific framework that builds instant rapport with rural clients, replacing generic business stages with farming realities.
- **Who it is suitable for:** Agricultural clients, farmers, sharemilkers, and rural enterprise operators.

How to use the material in practice (Step-by-Step):

1. **Set the Rural Agenda:** Present the tailored pie chart focusing on the Review Accts, Farmer's Growth Position, Rural Volatility, and Strategic Spending.
2. **Review Accounts:** Go over draft accounts, highlight concerns, review tax positions, and finalize filing timelines just like a standard business.
3. **Assess Farmer's Growth Position:** Use the 8-tier diagonal chart to map where the farmer currently is (e.g., Herd Manager) versus their desired position (e.g., Sharemilker), noting the timeframe.
4. **Discuss Rural Volatility:** Address volatility through the lens of forecasting probability, utilizing the same visual 'speed wobbles' analogy to prevent reckless scaling.
5. **Develop the 5-Year Strategic Spending Plan:** Categorize the farmer's upcoming capital expenditure into Lifestyle (New Boat), Operational (New Tractor), and Strategic (Irrigation System), attaching specific monthly timeframes to each.
6. **Finalize Actions:** Optionally use the Start, Stop, Keep matrix to lock in operational behavioral changes for the coming year.

Common Q&A:

1. **Q: How does the Rural Agenda replace standard EOY components?** A: It replaces the generic Growth Curve with the "Farmer's Growth Position" and introduces "Strategic Spending" as a core agenda item.

2. **Q: What are the lower and upper bounds of the Farmer's Growth Position?** A: The ladder starts at 'Labourer' (Stage 1) and peaks at 'Vertical/Consortium Owner' (Stage 8).
3. **Q: Into what three categories is the 5-year Strategic Spending Plan divided?** A: Lifestyle, Operational, and Strategic.
4. **Q: What is an example of a 'Strategic' farm expense?** A: A Herd Home, Feed Pad, Irrigation System, or Alternative Livestock option.
5. **Q: Does the rural meeting still cover traditional account summaries and tax positions?** A: Yes, the standard 6-step Accounts Review remains the foundational step of the meeting.

"EOY Advisor Scripts Only"

Benefits:

- **How it helps the business owner:** It ensures the meeting is delivered smoothly and professionally, reducing client defensiveness by introducing challenging concepts through safe, third-person personas.
- **How it helps the advisor:** It provides exact psychological framing phrases to control the meeting, specific role-play directions to manage difficult "Mr Prickly" personalities, and clear instructions on deploying global and local attention hooks.
- **Who it is suitable for:** Advisors and coaches preparing their delivery style and psychological approach ahead of client meetings.

How to use the material in practice (Step-by-Step):

1. **Frame the Meeting Structure:** Open by bridging from the personal to the business zone ("How're you going for time today?"), assume permission ("If it's o-k with you..."), take control, and then share the power.
2. **Rehearse for 'Mr Prickly':** Identify the client's persona in advance. Practice tone, posture, pace, and inflection to achieve congruence (e.g., matching the energy of an angry client or staying high-level with a rude client).
3. **Deploy the Global Hook (Growth Curve):** First, position the curve globally. Second, reveal it using a persona ("Bob the Chocolate maker") to create

psychological dissociation. Finally, connect the framework back to the client so they can anticipate future issues.

4. **Deploy the Local Hook (Volatility):** Ask if they have ever seen a vehicle get 'speed wobbles'. Use this as a bridge to explain that business systems must be balanced before attempting growth.
5. **Pivot to Solutions:** Transition to the 'WHAT-HOW' discussion by reviewing key products, admin procedures, marketing tactics, and working capital solutions.

Common Q&A:

1. **Q: What is the exact script to bridge from the 'Personal Zone' to the 'Business Zone'?** A: "How’re you going for time today?...".
2. **Q: How should an advisor handle an "Extremely withdrawn / quiet" client persona?** A: The advisor should "Fill up the 'theatre' with energy - use body movements to assist".
3. **Q: What is the difference between the two EOY 'Attention Hooks'?** A: The Growth Curve acts as a "Global Reference" focused on the Big Picture ("Where am I going?"), while Volatility Analysis acts as a "Local Reference" focused on the Micro Vision ("What's happening to me right now?").
4. **Q: Why is a persona used to reveal the Growth Curve?** A: It ensures the advisor talks in the 3rd person to create dissociation, making it safer for the client to reflect on issues.
5. **Q: How do you address an angry and rude client?** A: Stay 'high level' and avoid reacting. Once they respond, use the 'By the Way' script ("we can get to the source of what's making you angry... we'll know soon enough").

BRANCH CHAIN LOGIC TABLE

Logic Branch	IF (Condition / Trigger)	THEN (Action / Next Step)	Additional Context / Notes
Meeting Start	Client arrives for standard EOY meeting	Use psychological bridge: "How're you going for time today?..." followed by "If it's o-k with you..."	Assumes permission and smoothly transitions from personal zone to business zone.
Persona: Angry Couple	Client presentation is highly emotional / at risk	Match the energy of the 'most at risk' client	Ensures congruence in delivery during the Stage 3 role-play scenarios.
Persona: Depressed	Client presents as low energy or withdrawn	Adjust pace and tone to inspire 'follow-ship'	Critical not to get sucked down to their emotional level.
Persona: Angry & Rude	Client is combative or dismissive	Stay 'high level', do not react. Use the 'By the way' response	"we can get to the source of what's making you angry - maybe I can help you, maybe I can't".
Persona: Dismissive	Client dismisses younger or junior advisory members	Use tone & posture to assert status	Project a "You're lucky to have me" vibe without actually saying it.
Persona: Quiet	Client is extremely withdrawn / quiet	Fill up the 'theatre' with energy	Use body movements to assist in carrying the meeting momentum.

Attention Hook 1	Client needs to see the Macro Vision / Big Picture	Reveal the Growth Curve (Global Reference)	Use 'Bob the Chocolate maker' persona to create safe dissociation before applying it to the client.
Attention Hook 2	Client is struggling with immediate micro details or cash swings	Introduce Volatility Analysis (Local Reference)	Use the "speed wobbles" analogy to show that "The faster you go, the bigger the mess".
Industry specific	Client is a farmer or agricultural operator	Switch to "EOY Rural Meeting" Agenda	Replace Growth Curve with 8-stage "Farmer's Growth Position" and utilize the 5-year Strategic Spending Plan.
