

Succession Logic Branching (If-Then Logic Tree)

Logic Branch	IF (Condition / Trigger)	THEN (Action / Next Step)	Additional Context / Notes
Discovery Assessment	IF the client has not calculated their future income requirements...	THEN direct them to the Retirement Calculator in the portal prior to moving forward.	Essential to establish baseline readiness; without this, the exiting party cannot know if the business sale will sustain them.
Conflict Mitigation	IF there is current family disharmony during the wish-gathering phase...	THEN conduct the "Kids' Wish List" exercise and keep the document completely hidden from the incumbents.	Prevents premature conflict before the advisor can establish a unified framework during the "Concept Drawings" meeting.
Unexpected Disruption	IF the immediate successor withdraws due to major trauma or a change in "life path"...	THEN trigger the emergency "sudden departure" alternative plan.	Fulfills ISO 22301 dual-track requirements ensuring business continuity despite the loss of key personnel.
Successor Equity	IF the incoming successor was paid below a "fair market rate" while working in the business...	THEN negotiate a proportional discount to be applied to their final purchase price of the business.	Acknowledges past "sweat equity" and prevents resentment during the final handover valuation.
Sibling Discrepancies	IF disparate financial figures or business roles are provided to different siblings...	THEN discuss and agree on the methodology with all parties and formally establish a "Family Constitution."	Maintains transparency. The Advisor-e 'Salary Sacrifice' table can be used to objectively calculate compensation for siblings who took on outside burdens (e.g., caring for parents).
