

BRANCH CHAIN LOGIC TABLE

(Note: The logic triggers below are strictly based on the behavioural and operational scenarios explicitly found within the provided source text. External concepts not present in the text have been omitted to prevent hallucination).

Logic Branch	IF (Condition / Trigger)	THEN (Action / Next Step)	Additional Context / Notes
Service Tier 1: Basic Delivery	Client only wants baseline data compilation and summary reports.	Deliver an entry-level package focusing solely on Compilation and Assimilation.	Can be delivered cost-effectively via Camtasia voiceover video or Skype.
Service Tier 2: Trend Analysis	Client states: "I've got my data and key reports, but I need something else".	Progress to Interpretation; introduce trend analysis and wrap data around management meetings.	Requires recognizing correlation vs. causation.
Crisis Management Risk	Client lacks structure and is jumping from one issue to another in response to changing figures.	Move to the Application phase and implement the structured "light fundamentals program".	Forces the client to pay attention to six key focus areas (often areas of weakness) rather than reacting blindly.

Skill/Resource Allocation	Specific advisory steps require different levels of competence or are highly repetitive.	Delegate tasks to different levels within your team based on the stage.	E.g., basic verification to junior staff, coaching/observation to senior advisors.
Action Plan Implementation	An action plan/experiment has been determined from the interpreted data.	Initiate the Observation phase from a coaching perspective.	The advisor must "stay in the feedback loop" and redirect the client as necessary.
